

NCE Major Projects

13 JUNE 2007

ONGOING INVESTMENT

PRESS RELEASE
13 JUNE 2007

NCE Windows, a REHAU fabricator based in St Helens, has invested in new machinery to help further improve the quality and efficiency of its manufacturing.

The company, which produces around 150 frames per week in the REHAU S706 70mm system, has purchased a new 4-head corner cleaner, compressor, automatic twin cut bead saw and drain slot routing machine as part of its ongoing reinvestment programme.

Alongside the machinery, it has also purchased a new 7.5 tonne delivery vehicle to service its customers throughout the north west of England.

Chris Williams, a director at NCE, says: "NCE is a small fabricator looking to provide a very high quality, flexible and responsive service to customers buying REHAU. We differentiate ourselves from the big manufacturers with our attention to detail and our personal, tailored service.

"An important part of that is being able to guarantee the highest quality frames delivered on time, and our investment programme is designed to help us achieve this."

NCE already offers a standard five-day turnaround on frames but it can offer same day delivery if a frame is urgently required – for example if a window has been damaged on site or the wrong size ordered.

It is currently seeking ISO9002 and BSI accreditation for its windows and expects to announce further success stories shortly.
